PROFESSIONAL SUMMARY

Passionate Front-End Engineer and recent graduate skilled in HTML5, CSS3, JavaScript, Typescript, React, Next.js, Tailwind CSS, Sentry, Clerk, Stripe Connect, tRPC, MongoDB, GSAP, Inngest, Payload CMS, Convex, CodeMirror 6, Web Containers, and Vercel, with Udemy Full Stack certification & HSBC Women in Tech training, previously contributed as Research Associate with a team of 10 members, awarded Top Market Research Associate at MOXO(10-month tenure) & currently on a Career break, eager to return as an entry-level developer to build innovative web solutions in an Agile Environment focusing on Design Thinking principles. My projects include significant Technical Implementation & participation in Scrum practices, ensuring adherence to Design Principles and optimizing processes for efficiency. I am committed to autonomy in my work, taking responsibility for my projects while collaborating effectively with designers and using tools to create modular and efficient solutions.

WORK EXPERIENCE & KEY ACHIEVEMENTS

Full-Stack Development Upskilling & Career Transition | 8th Jan 2026 – Present

- Dedicated full-time to advanced technical training & building a production-ready portfolio using React, Next.js, Typescript
- Engineering scalable web applications & refining frontend architecture skills
- Actively contributing to Github & staying current with Industry best practices in full-stack development while applying the principles of user Interface design and UX Design Performance Metric analysis is part of my ongoing learning journey., ensuring all projects are optimized using tools like Lighthouse and Chrome for best practices.

Market Research Analyst– MOXO, Bangalore | Feb 2025 – Jan 2026

- Built and Delivered 8000+ high-quality buyer personas for enterprises across 7+ industries achieving the highest accuracy and adoption rate among all researchers at Moxo.
- Recognized as #1 Market Researcher Company-wide at Moxo for Outstanding performance and Contributions.
- Received Special Acknowledgement from leadership and peer Director for Dedication and Result.
- Conducted in-depth market Research across Multiple Industry verticals to qualify prospective clients and provide strategic insights for business growth. Collaborated with Sales and marketing team to lead generation optimization through CRM management (Hubspot) and data driven recommendations using Data Visualization technique while ensuring adherence to Accessibility standards

Key Projects – Solved at Moxo

- **High-Accuracy and Decision-making**
  Built and delivered high-quality B2B lead lists (8,000+ contacts) using LinkedIn Sales Navigator, ZoomInfo, Contactout, and Apollo, achieving 90–95% accuracy in decision-maker titles and contact details.
- **Ideal Customer Profile (ICP) Development & Lead Qualification**
  Consistently generated 300-400 qualified leads per week & identified & qualified ideal customer profiles for Saas, IT Services, Digital Marketing, Wealth Management, financial Services, Legal Accounting, Cloud Solutions, and digital transformation offerings, resulting in 3-5x higher response rates compared to generic lead lists.
  Delivered end-to-end B2B leads—from research and ICP development to identifying decision-makers and building qualified lists—resulting in 3–5× faster pipeline filling and a 50–70% reduction in cost-per-lead.

TECHNICAL SKILLS: Frontend & UI

Languages: **Javascript(ES6+), Typescript**
Libraries & Frameworks: **Reactjs, Angular, Next.js 16, GSAP(Animations)**
Styling: **CSS3, Tailwind CSS v4, Responsive Design**
Specialized UI: **CodeMirror 6 (Text Editors), WebContainers(Browser-based Environments)**

TECHNICAL SKILLS: Backend & API

Frameworks & Logic: **tRPC (Type-safe APIs), Firecrawl, Inngest(Serverless Workflows/Queues), NextAuth.**
Authentication: **Clerk**
Payments: **Stripe Connect**
Databases & Storage: **MongoDB, Convex**
MONITORING, AI & Automation: **Sentry, CodeRabbit, Junie**
Version Control: **Git, GitHub**
SOFT SKILLS: **Communication**

CS Fundamentals: DSA, DBMS, Operating System, OOP Concepts, Computer Networks, SEO, Secure Coding

Solved 150+ LeetCode Problems in JavaScript Covering Dynamic programming, Graph theory & Array manipulation, including implementation of algorithms ensuring Optimalisation in performance and security measures against XSS vulnerabilities.

PROJECTS

Polaris | Build a Complete Browser-native Own AI Powered coding Environment IDE platform **Jan – Mar 2026**

Next.js, Typescript, Convex, Clerk, Inngest, CodeMirror 6, WebContainers, Firecrawl, Sentry, CodeRabbit

https://polaris-five-phi.vercel.app/

https://github.com/Spandana-N-S/polaris

- **AI-Driven Development Agent in Real-Time Browser Execution:** Build an autonomous AI agent powered by Inngest that creates, modifies files, scrapes URLs via Firecrawl, and executes code entirely from natural-language prompts. Integrated WebContainers to deliver a full Node.js runtime, terminal, live preview, and code execution directly in the browser - zero local setup required. Used CodeMirror 6 with Ghost-text AI Suggestions, syntax highlighting, file explorer, resizable split panes, and selection-based editing. Used Convex for real-time data sync Engine.
- **Seamless Github Integration:** Implemented full repo import/export with Clerk OAuth, background jobs via Inngest, real -time status tracking, and AI-powered pull-request reviews using CodeRabbit.
- **Production-Grade Reliability & Monitoring with End-to-End Modern Workflow:** Added Clerk for Authentication & billing, Sentry for error tracking + AI token/cost monitoring, & structured logging for every user interaction & background job. Delivered a complete professional IDE with project creation dialog, conversation system, 13+ AI tools, optimistic UI updates, & one-click vercel deployment - replicating how modern AI coding tools work.

Shoply - Full-stack E-Commerce Application | Build a Complete Production ready App from Scratch **Feb – Mar 2026**

Next.js16(App Router), Typescript, Tailwind CSS V4, NextAuth, MongoDB

https://github.com/Spandana-N-S/shoply

- **Role-Based Authentication:** Built a secure system supporting Admin, Seller, and Buyer roles. Included administrative workflows to approve or reject vendor requests, ensuring a professional marketplace environment.
- **Multi-Variant Product Management:** Developed a robust product system with dynamic attributes like size and color. Features include full CRUD functionality, subcategory management, and integrated image uploads. Also streamlined server-side processes to enhance responsiveness.
- **Order and Search systems with Analytics Dashboard**: Implemented a real-time order lifecycle with status tracking and buyer cancellation flows. Added advanced search filters for multi-word queries, pricing, and category-based sorting.
- **Payment Gateway Integration:** Securely processing financial transactions using services like Stripe. This requires handling webhooks for payment verification, managing refunds, & ensuring PCI DSS compliance
- **Notification & Messaging System:** Implementing an automated system to send transactional emails or push notifications using Nodemailer or SendGrid. This is for updating users on order statuses, password resets, or promotional events

Hangman Game | Fully Interactive Browser - based word guessing game | Built with Vanilla Javascript **February 2026**

Vanilla Javascript, HTML, CSS

https://github.com/Spandana-N-S/hangman-Javascript

- **Game Logic & Mechanics:** Developed core game engine with random word selection from 260+ word list, hint system, letter guessing, win/loss detection, and progressive hangman stages (max 6 incorrect guesses).
- **Interactive UI & Controls:** Created dynamic on-screen keyboard with click events, real-time word display, guessed letter highlighting, guess counter, & animated game-over modal showing victory/loss with correct word & Play Again button.
- **Polished Design & Responsiveness:** Designed clean, modern UI using flexbox, Google Fonts, smooth animations, hover effects, and fully responsive layout for optimal experience across devices, ensuring compatibility with WCAG standards.

EDUCATION

BCA, Computer Science CGPA 7.57–Bangalore University, GFGC, Bangalore (2021-24)

CEBA, Computer Science, ST.Anthony's PU College, Bangalore (2020-21)

CERTIFICATIONS

- **Complete Full Stack Web Development Completion Certificate – Codecraft Academy | Udemy (2026)**
- **Women In Tech Programme Course Completion Certificate in Web Mobile Applications – Nirmaan Organization | Supported by HSBC (2023-24)**
- **Career Essentials in Github Professional Certificate – LinkedIn Learning (2024)**
- **Project Management Job Simulation Completion Certificate – Forage (2024)**
